Sub: Plantation without soil moisture conservation structure in USHARMUKTI Blocks

Sir/Madam,

It has come to our knowledge that on the undulated terrain of the western districts, plantation including orchard is coming up on barren, waste land without accompanying soil-moisture conservation structures at the land leading to mortality or dwarfed growth of the saplings.

In all such cases, it is advised that plantation including orchard should be taken up along with soil-moisture conservation structures like 30-40 models, Continuous Contour Trenches (CCT), Staggered Contour Trenches (SCT), v-trenches as applicable. It is also advised to erect the structures in all old plantation as well.

Yours sincerely,

20/09/2017

Commissioner, P&RD Department
